

# APNIC IRM Tutorial

Thimphu, Bhutan

14 January 2014

Proudly Supported by:

**APNIC**

# Presenter

Srinath Beldona

**Senior Technical Specialist, APNIC**

**Contact:**

Email: [srinath@apnic.net](mailto:srinath@apnic.net)

**APNIC**

# Agenda

- **Introduction to APNIC**
- Policy Development Process
- Internet Registry Policies
- Requesting IP Addresses
- Whois Database and MyAPNIC
- Autonomous System Numbers
- Reverse DNS

# What is APNIC?

- Regional Internet Registry (RIR) for the Asia Pacific region
  - One of five RIRs currently operating around the world
  - A membership-based, not-for-profit organization
- Industry self-regulatory body
  - Open
  - Consensus-based
  - Transparent
- Meetings and mailing lists
  - <http://meetings.apnic.net>
  - <http://www.apnic.net/mailing-lists>

# What does APNIC do?

## Resource service

- IPv4, IPv6, ASNs
- Reverse DNS delegation
- Resource registration
  - Authoritative registration server
    - Whois
    - IRR

## Policy development

- Facilitating the policy development process
- Implementing policy changes

## Information dissemination

- APNIC conferences
- Web and ftp site
- Publications, mailing lists
- Outreach seminars

## Training

- Face to Face Workshops
  - Subsidized for members
- free eLearning webclasses

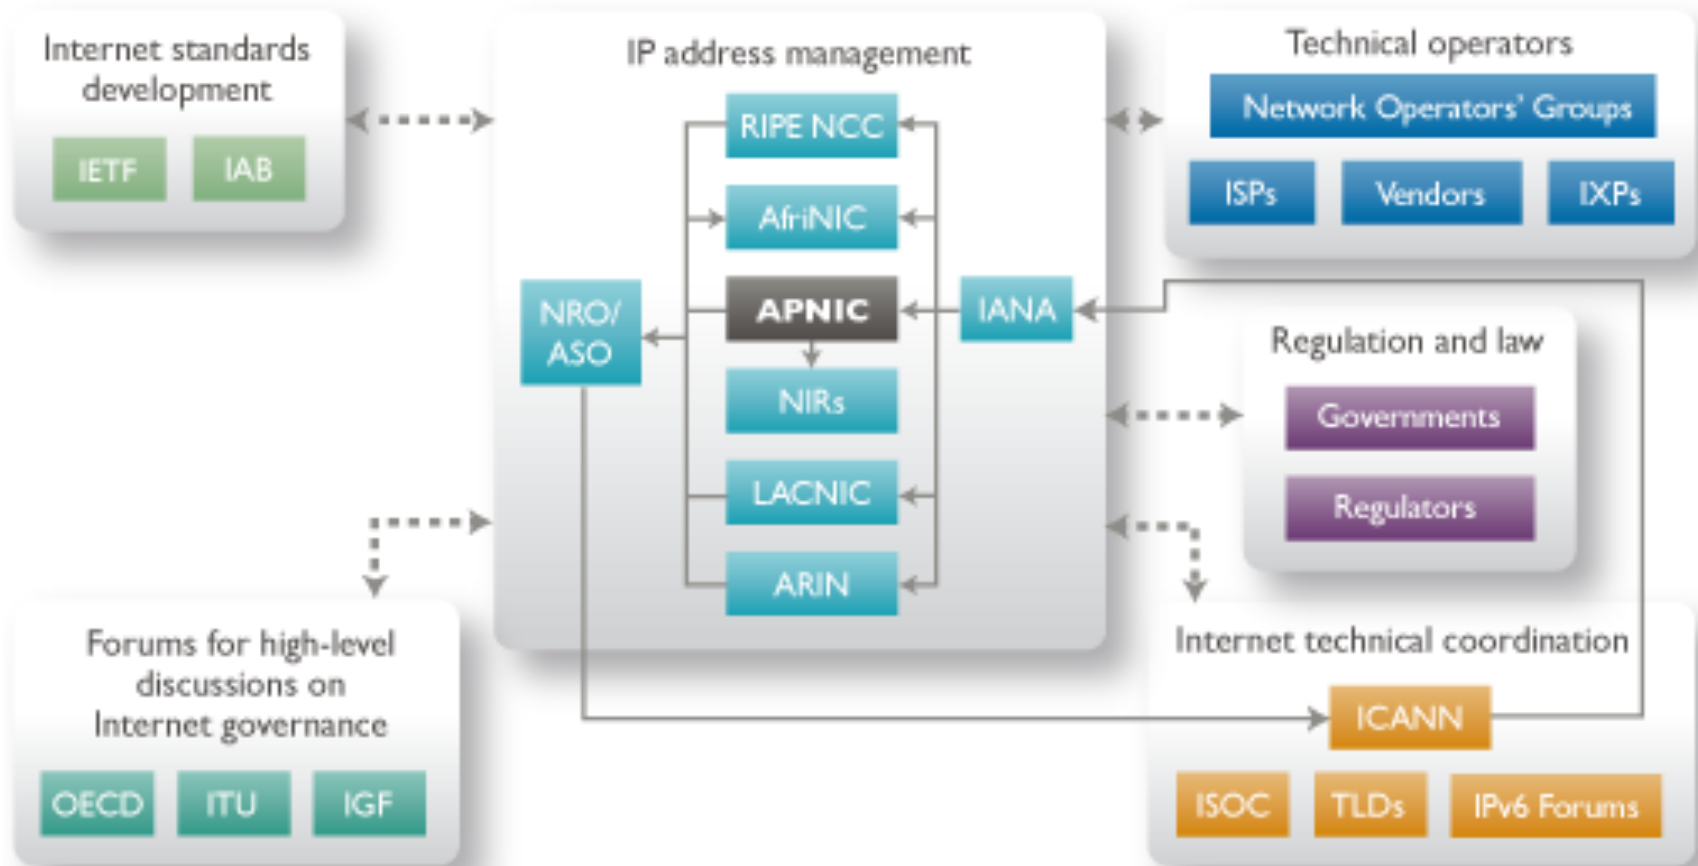

# Where is the APNIC Region?

# APNIC is NOT

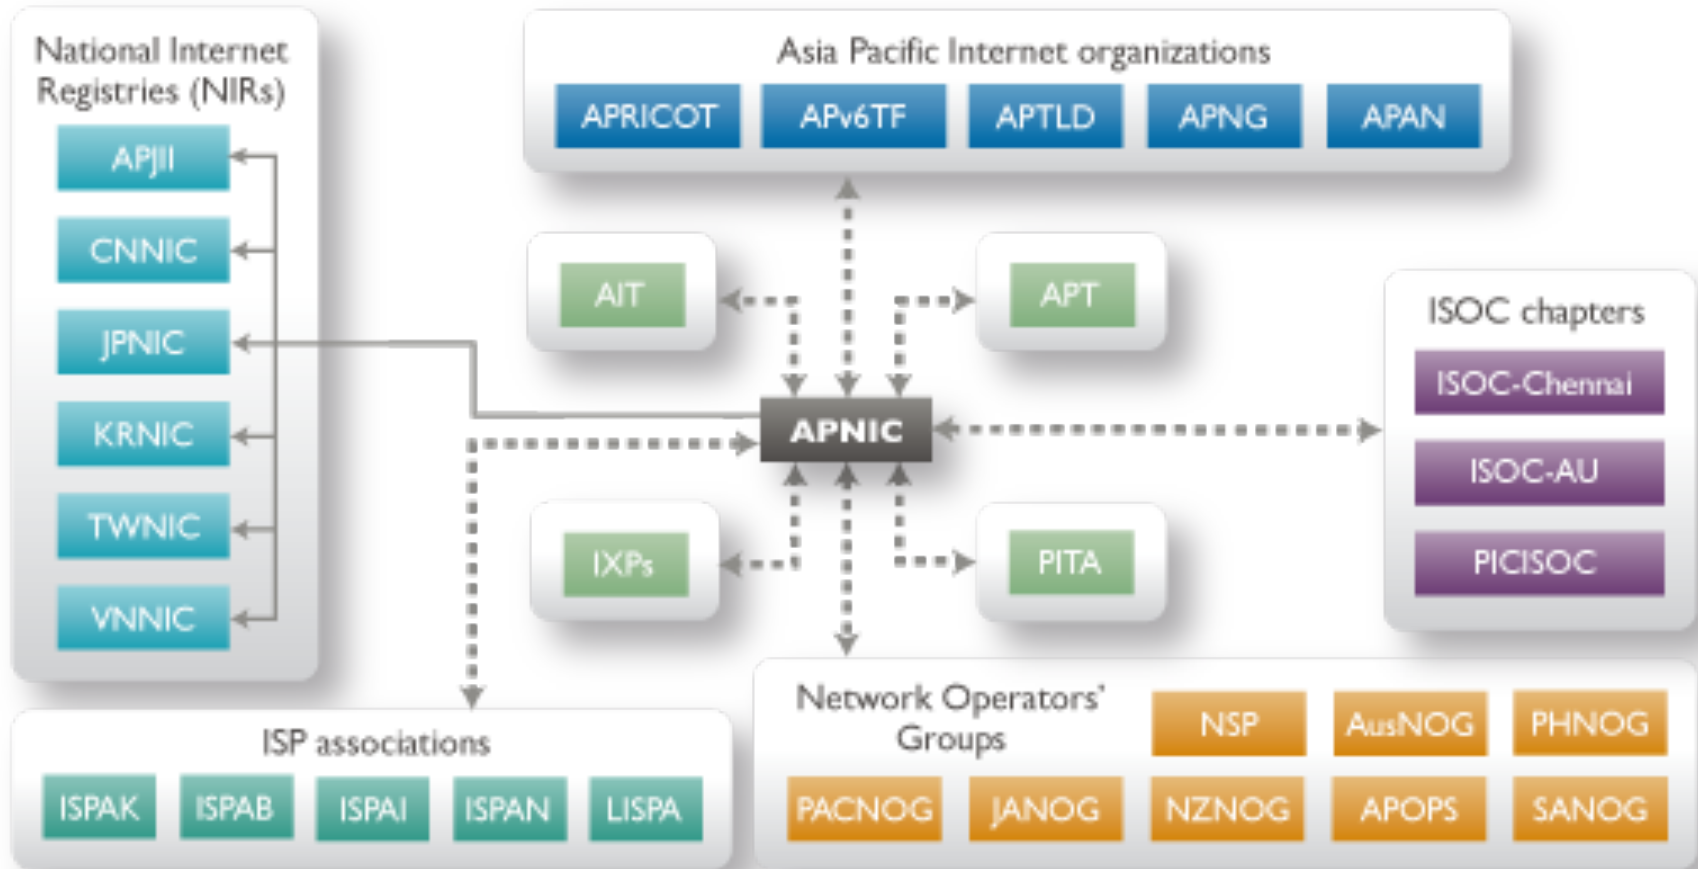

- A network operator
  - Does not provide networking services
    - Works closely with APRICOT
- A standards body
  - Does not develop technical standards
    - Works with IETF in relevant areas (IPv6, etc.)
- A domain name registry or registrar
  - Will refer queries to relevant parties

# APNIC from a Global Perspective

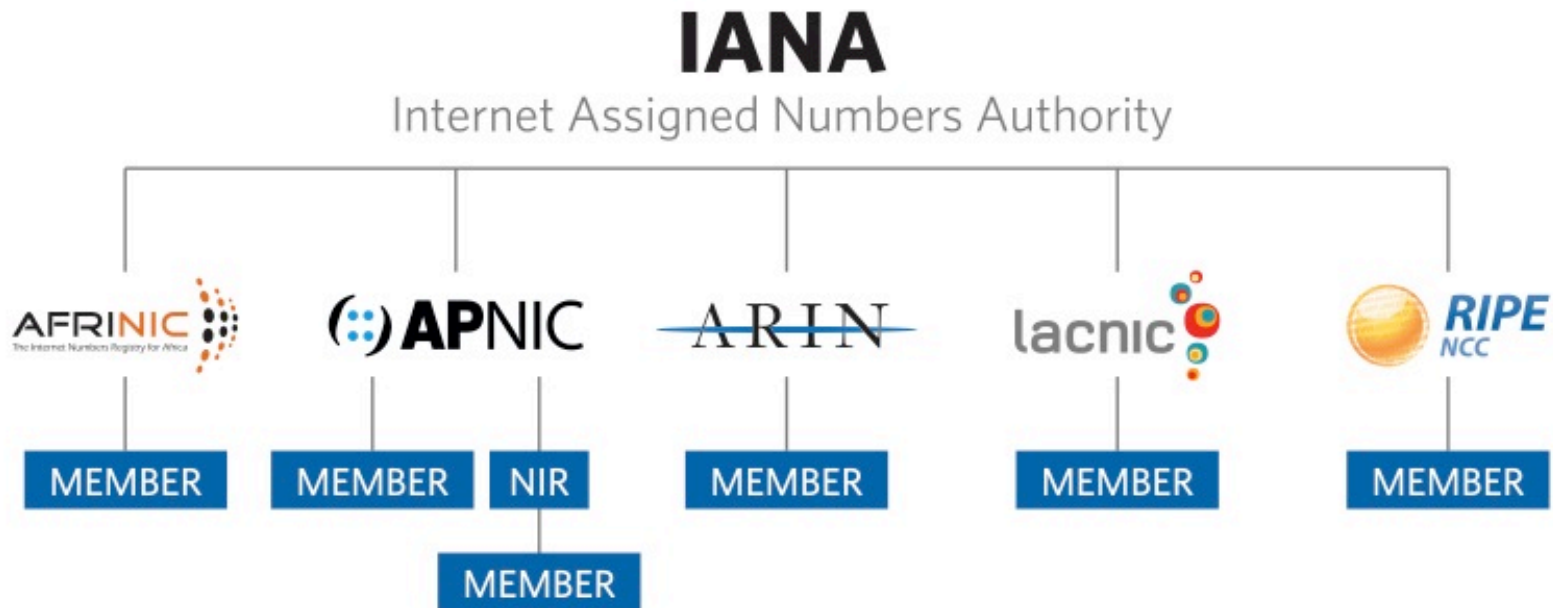

# APNIC in the Asia Pacific

# Internet Registry Structure

# Global Policy Coordination

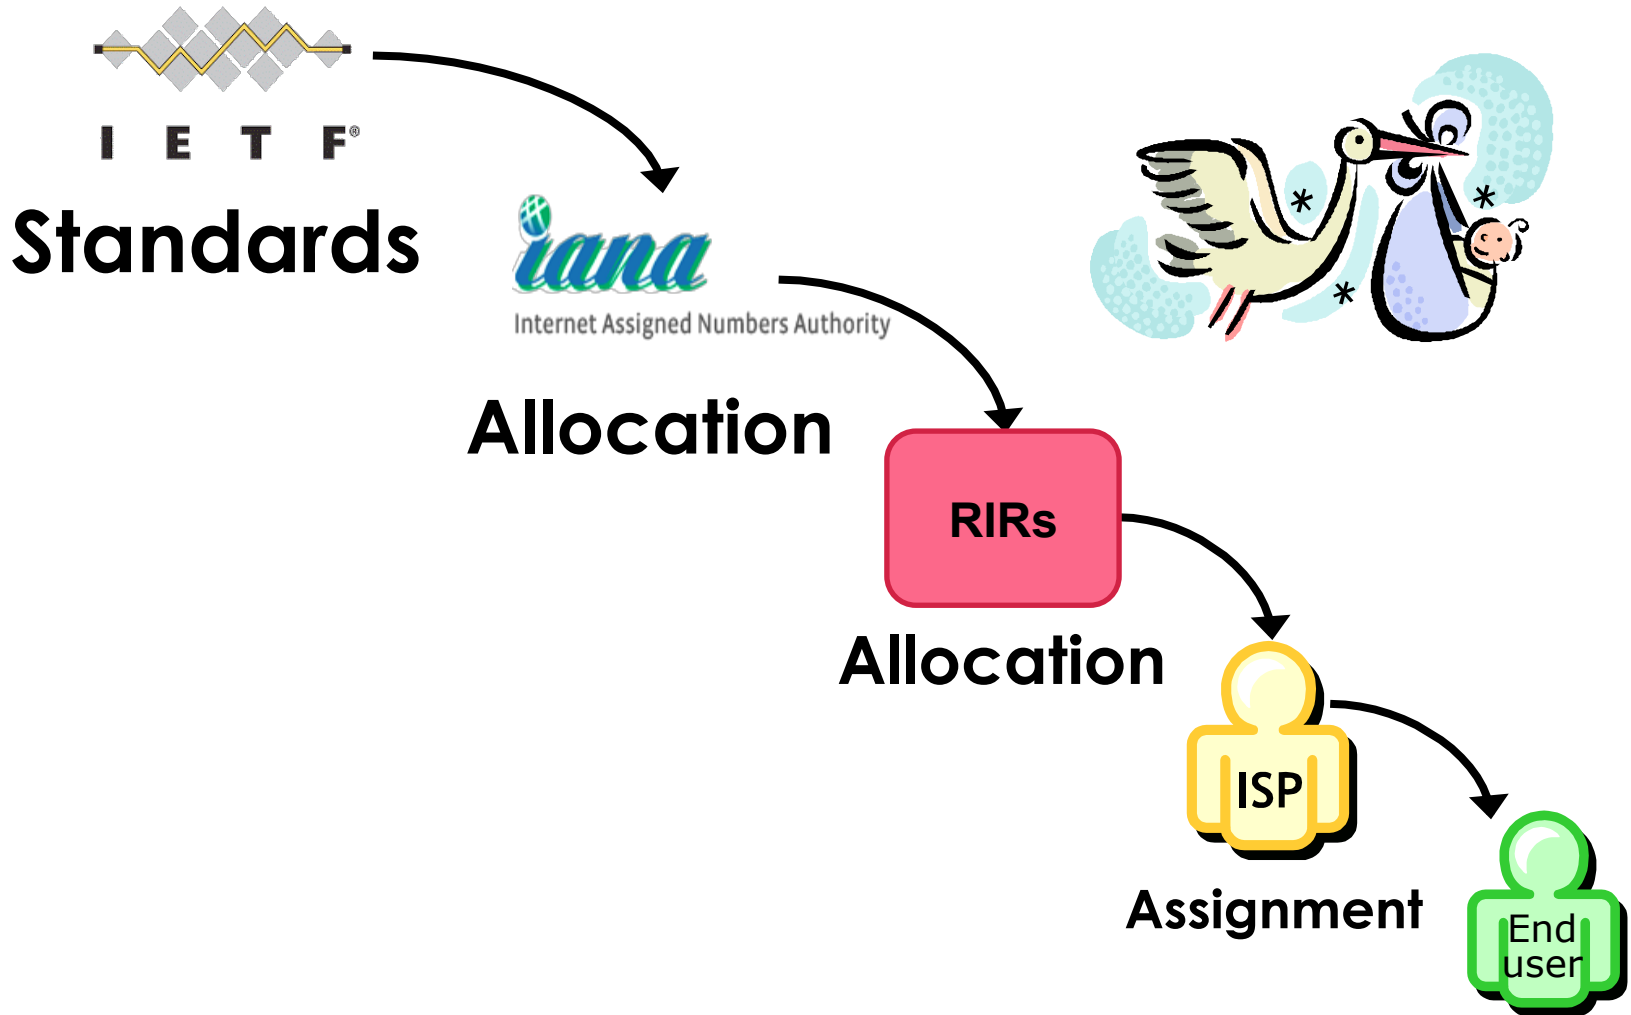

- The main aims of the NRO are to:
  - Protect the unallocated Internet number resource pool
  - Promote and protect the bottom-up policy development process
  - Act as a focal point for Internet community input into the RIR system

# Global Policy Coordination

- The main function of ASO:
  - receives global policies and policy process details from the NRO
  - forwards global policies and policy process details to ICANN board

# Where do IP Addresses come from?

# Questions

# Agenda

- Introduction to APNIC
- **Policy Development Process**
- Internet Registry Policies
- Requesting IP Addresses
- Whois Database and MyAPNIC
- Autonomous System Numbers
- Reverse DNS

# You are Part of the APNIC Community!

Open forum in the Asia Pacific

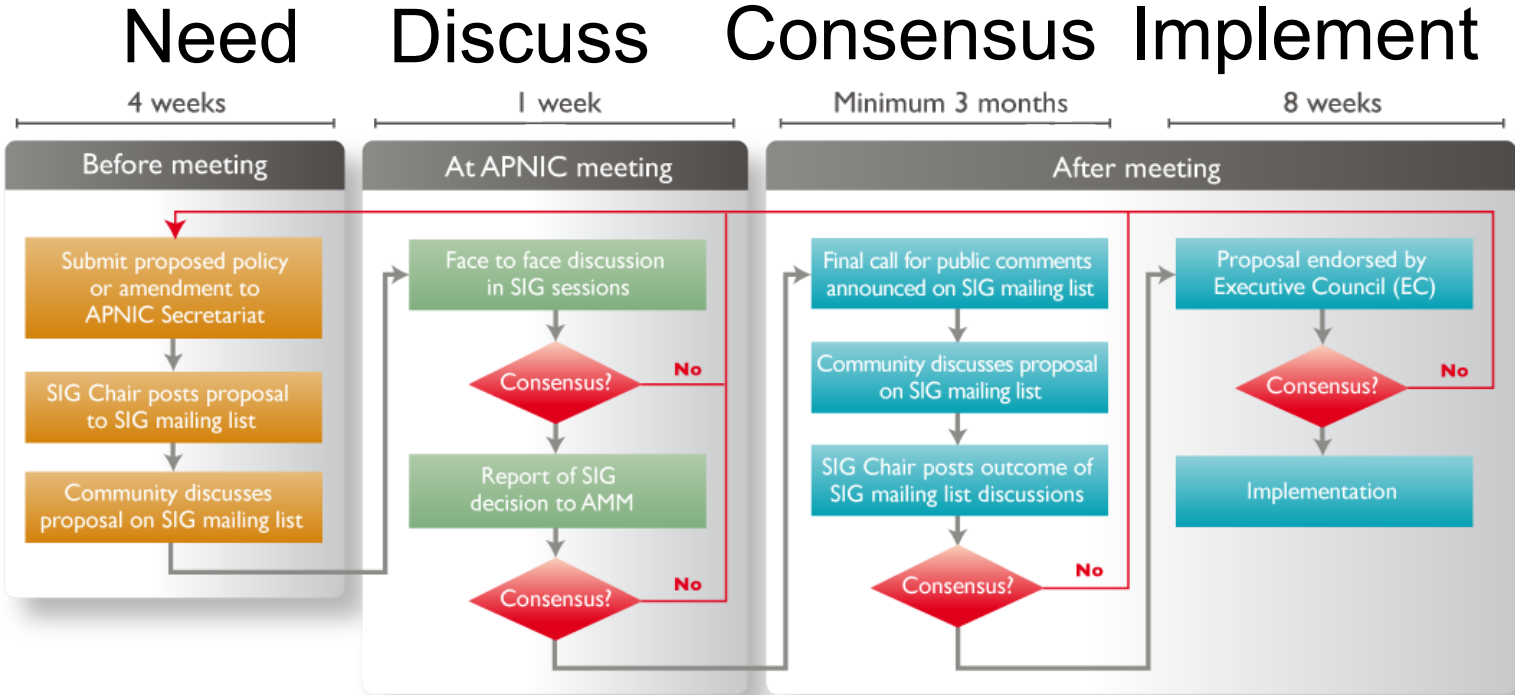

A voice in regional Internet operations through participation in APNIC

# Policy Development Process

# Policy Development Process

You can participate!

# APNIC

# How to Make Your Voice Heard

- Contribute on the public mailing lists
  - <http://www.apnic.net/mailing-lists>
  - Attend APNIC conferences
  - Or send a representative
  - Watch the webcast (video streaming) from the conference web site
  - Read live transcripts from APNIC web site
  - And express your opinion via the Jabber chat
- Provide your feedback
  - Training or community outreach events

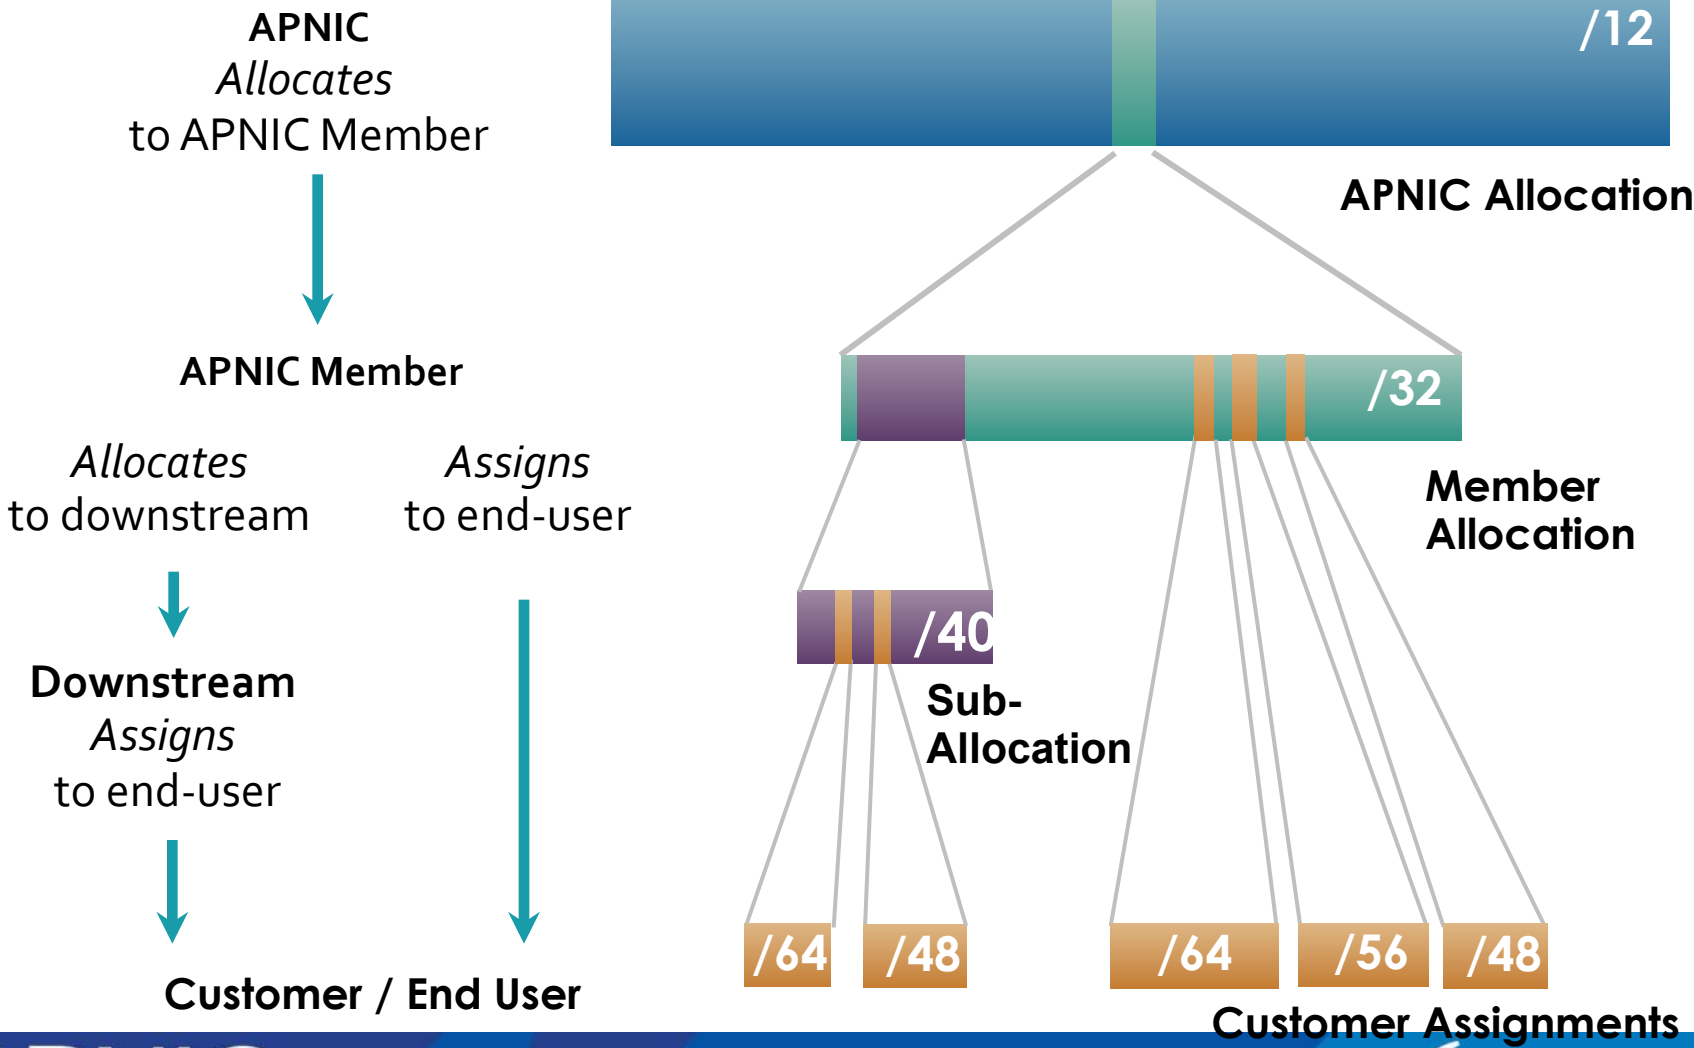

# Questions

# Agenda

- Introduction to APNIC
- Policy Development Process
- **Internet Registry Policies**
- Requesting IP Addresses
- Whois Database and MyAPNIC
- Autonomous System Numbers
- Reverse DNS

# IPv6 Allocation and Assignment

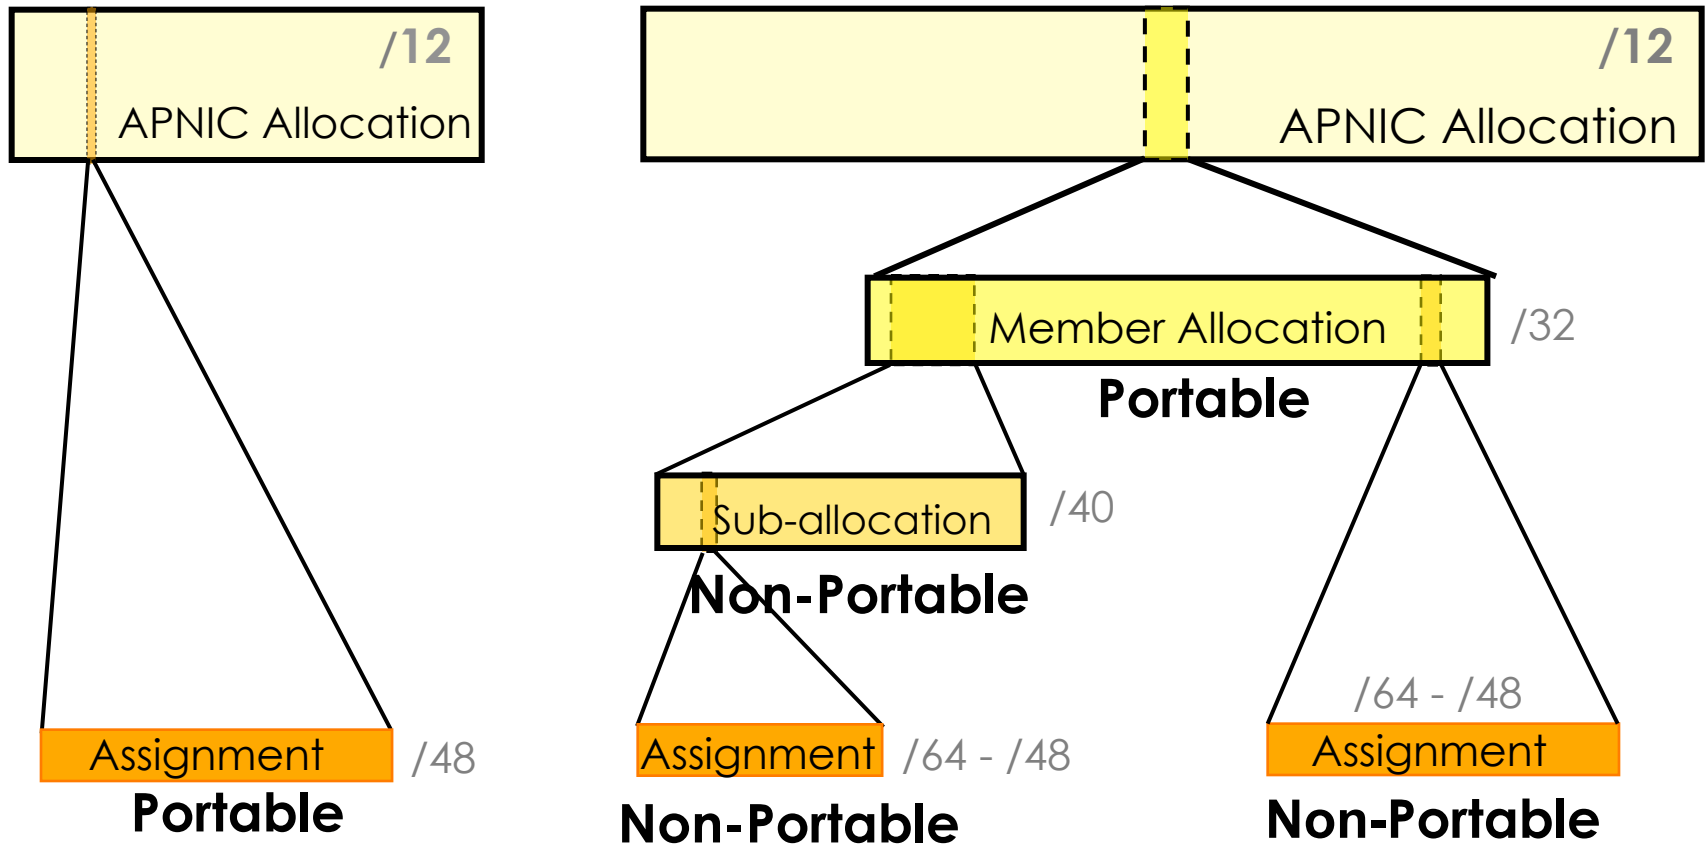

# Portable and Non-Portable

- Portable Assignments
  - Customer addresses independent from ISP
  - Keeps addresses when changing ISP
  - Bad for size of routing tables
  - Bad for QoS: routes may be filtered, flap-dampened
- Non-portable Assignments
  - Customer uses ISP's address space
  - Must renumber if changing ISP
  - Only way to effectively scale the Internet
- Portable allocations
  - Allocations made by APNIC/NIRs

# Address Management Hierarchy

Describes “portability” of the address space

# Internet Resource Management Objectives

## Conservation

- Efficient use of resources
- Based on demonstrated need

## Aggregation

- Limit routing table growth
- Support provider-based routing

## Registration

- Ensure uniqueness
- Facilitate trouble shooting

Uniqueness, fairness and consistency

# Aggregation and Portability

## Aggregation

## No aggregation

# Aggregation and Portability

## Aggregation

## No aggregation

# Growth of the Global Routing Table

**487889 prefixes**  
As of 27 Dec 2013

Source: <http://www.cidr-report.org/as2.0/>

# APNIC Policy Environment

*“IP addresses are not freehold property”*

- Assignments & allocations on license basis
  - Addresses *cannot* be bought or sold
  - Internet resources are public resources
  - ‘Ownership’ is contrary to management goals

*“Confidentiality & security”*

- APNIC to observe and protect trust relationship
  - Non-disclosure agreement signed by staff

# APNIC Allocation Policies

- Aggregation of allocation
  - Provider responsible for aggregation
  - Customer assignments /sub-allocations must be non-portable
- Allocations based on demonstrated need
  - Detailed documentation required
- All address space held to be declared
  - Stockpiling is not permitted

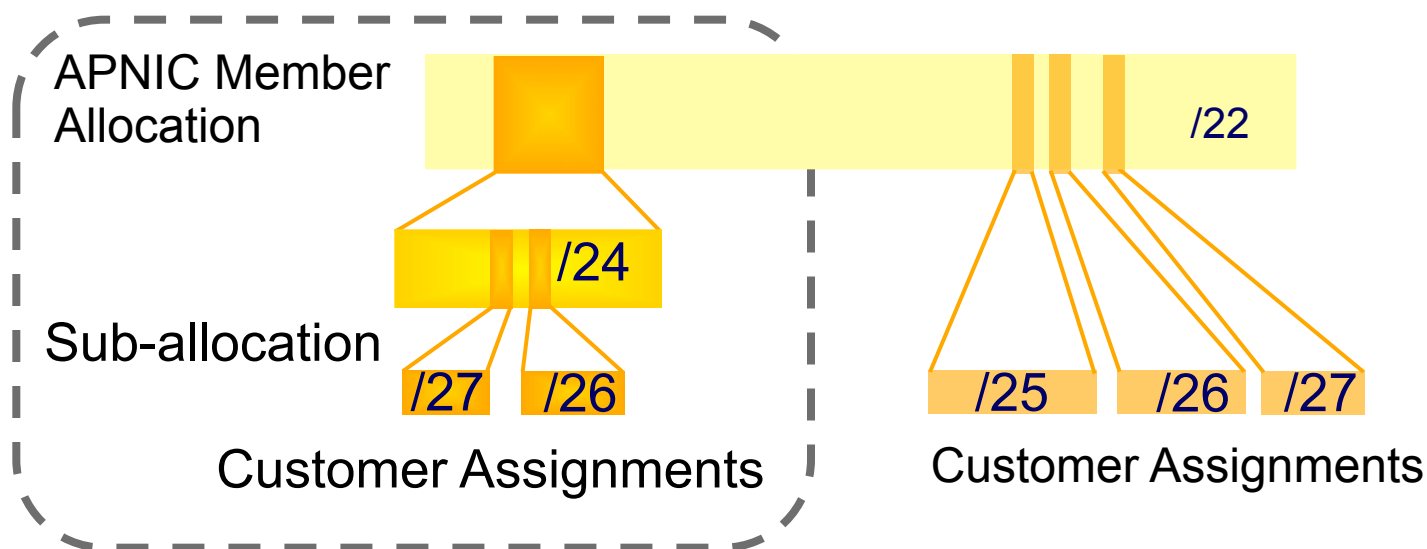

# APNIC IPv4 Allocation Policies

- APNIC IPv4 allocation size per account holder
  - Minimum /24
  - Maximum /22
- According to current allocation from the final /8 block
  - Allocation is based on demonstrated need

# IPv4 Sub-allocations

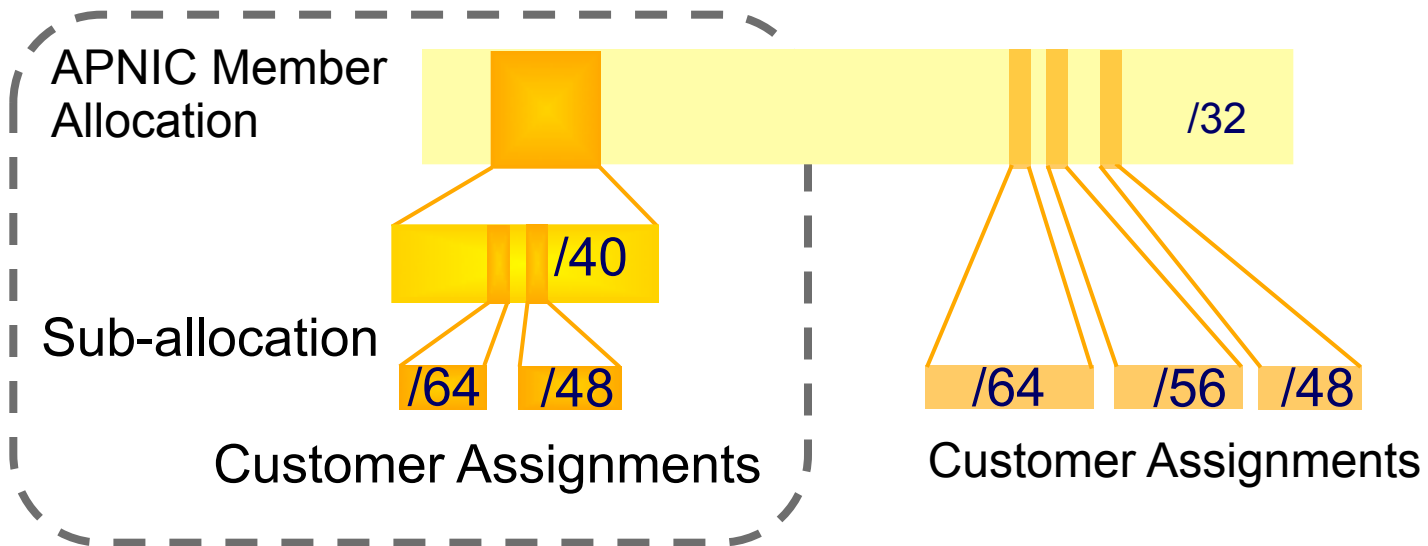

- No max or min size
  - Max 1 year requirement
- Assignment Window & 2nd Opinion
  - applies to both sub-allocation & assignments
  - Sub-allocation holders don't need to send in 2nd opinions

# IPv6 Allocation Policies

- Initial allocation criteria
  - minimum of /32 IPv6 block
  - larger than /32 may be justified
- For APNIC members with existing IPv4 space
  - One-click Policy (through MyAPNIC)
- Without existing IPv4 space
  - Must meet initial allocation criteria
- Subsequent allocation
  - Based on HD ratio (0.94)
  - Doubles the allocated address space

# IPv6 Sub-allocations

- No specific policy for LIRs to allocate space to subordinate ISPs
- All /48 assignments to end sites must be registered
- Second opinion
  - LIRs do not need to submit second opinion request before making sub-allocations to downstream ISPs
  - Must submit a second opinion request for assignments more than /48

# IPv6 Assignment Policies

- Assignment address space size
  - Minimum of /64 (only 1 subnet)
  - Normal maximum of /48
  - Initial allocation larger than /32 may be justified
- Assignment of multiple /48s to a single end site
  - Documentation must be provided
  - Will be reviewed at the RIR/NIR level
- Assignment to operator's infrastructure
  - /48 per PoP as the service infrastructure of an IPv6 service operator

# Portable assignments

- Small multihoming assignment policy
  - For (small) organisations who require a portable assignment for multi-homing purposes
- Criteria
  - Applicants currently multihomed, or demonstrate a plan to multihome within 1 month
  - Demonstrate need to use 25% of requested space immediately, and 50% within 1 year

# IXP Assignments

- Criteria
  - 3 or more peers
  - Demonstrate “open peering policy”
- APNIC has a reserved block of space from which to make IXP assignments
- Assignment size:
  - IPv4: /24
  - IPv6: /48 minimum

# Portable Critical Infrastructure

- What is Critical Internet Infrastructure?
  - Domain registry infrastructure
    - Root DNS operators, gTLD operators, ccTLD operators
  - Address Registry Infrastructure
    - RIRs & NIRs
    - IANA
- Why a specific policy ?
  - Protect stability of core Internet function
- Assignment sizes:
  - IPv4: /24
  - IPv6: /32 (Maximum)

# Sub-allocation Guidelines

- Sub-allocate cautiously
  - Seek APNIC advice if in doubt
  - If customer requirements meet min allocation criteria:
    - Customers should approach APNIC for portable allocation
- Efficient assignments
  - ISPs responsible for overall utilisation
    - Sub-allocation holders need to make efficient assignments
- Database registration (WHOIS Db)
  - Sub-allocations & assignments to be registered in the db

# IPv4 Transfer Policies

- Between APNIC members
  - Minimum transfer size of /24
  - source entity must be the currently registered holder of the IPv4 resources
  - recipient entity will be subject to current APNIC policies
- Inter-RIR IPv4 Transfers
  - Minimum transfer size of /24
  - Conditions on the source and recipient RIR will apply

# Historical Resource Transfer

- Bring historical resource registrations into the current policy framework
  - Allow transfers of historical resources to APNIC members
    - the recipient of the transfer must be an APNIC members
    - no technical review or approval
    - historical resource holder must be verified
    - resources will then be considered "current"
- Address space subject to current policy framework

# Questions

# Agenda

- Introduction to APNIC
- Policy Development Process
- Internet Registry Policies
- **Requesting IP Addresses**
- Whois Database and MyAPNIC
- Autonomous System Numbers
- Reverse DNS

# How Do I Get Addresses?

- Decide what kind of number resources you need
  - IPv4, IPv6
- Check your eligibility
  - On the website [www.apnic.net](http://www.apnic.net)
  - Contact the helpdesk [helpdesk@apnic.net](mailto:helpdesk@apnic.net)
- Become familiar with the policies
  - [www.apnic.net/policy](http://www.apnic.net/policy)
- Apply for membership and resources

# IPv4 Address Space

## STATUS OF 256 /8s IPv4 ADDRESS SPACE

Source: NRO Q3 2013

# AVAILABLE IPv4 /8s IN EACH RIR

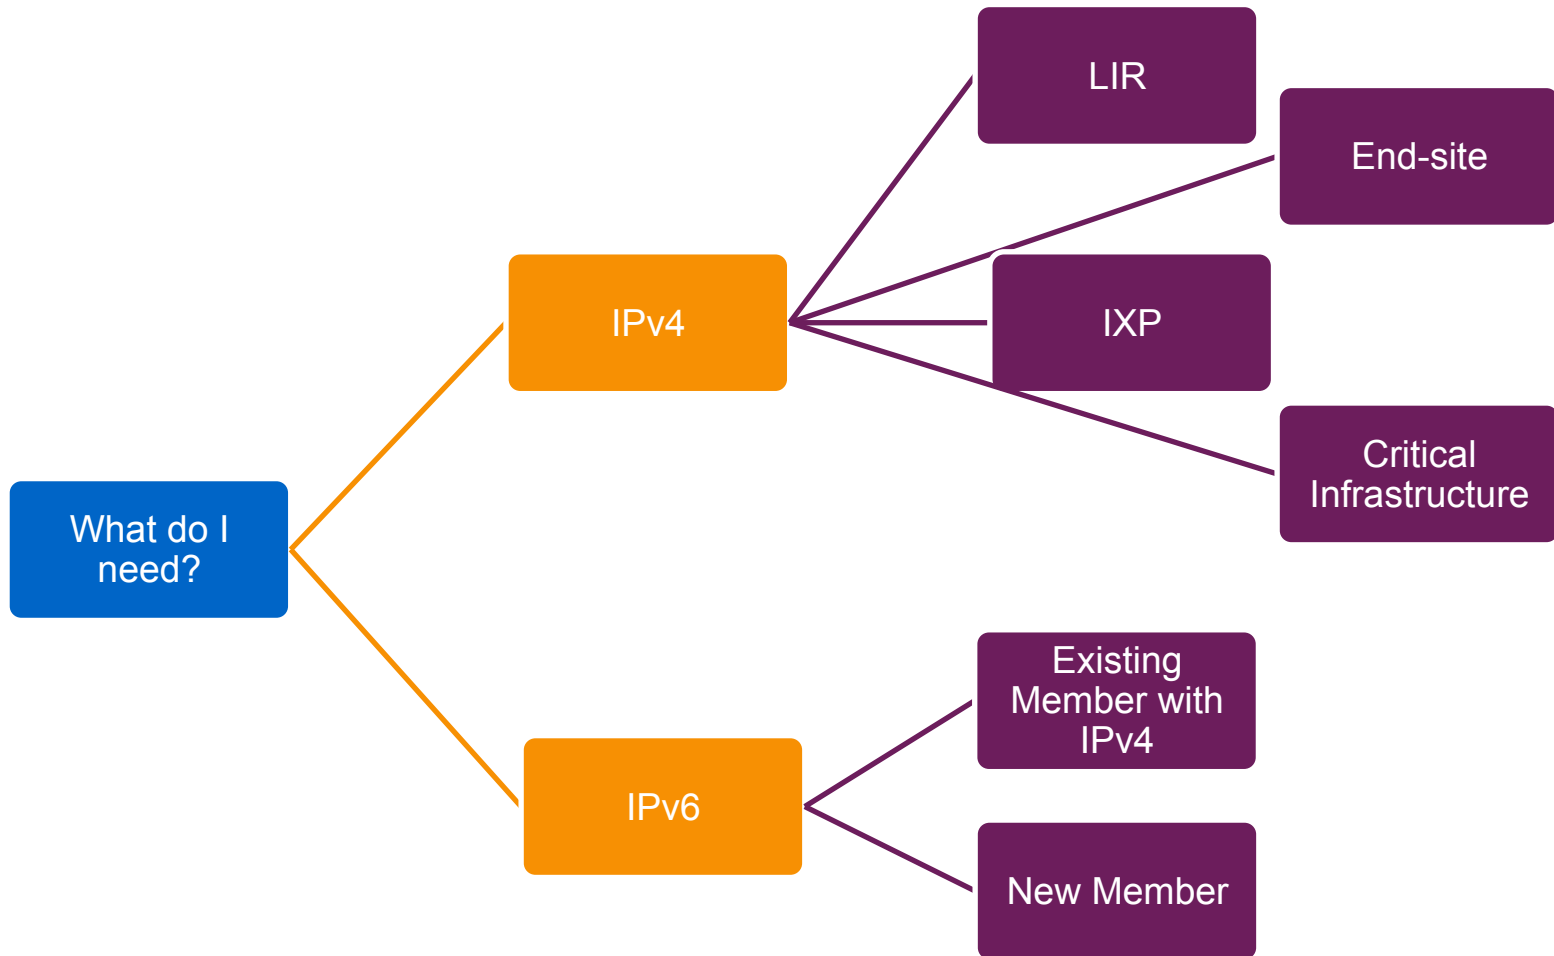

Source: NRO Q3 2013

# How Do I Get Addresses?

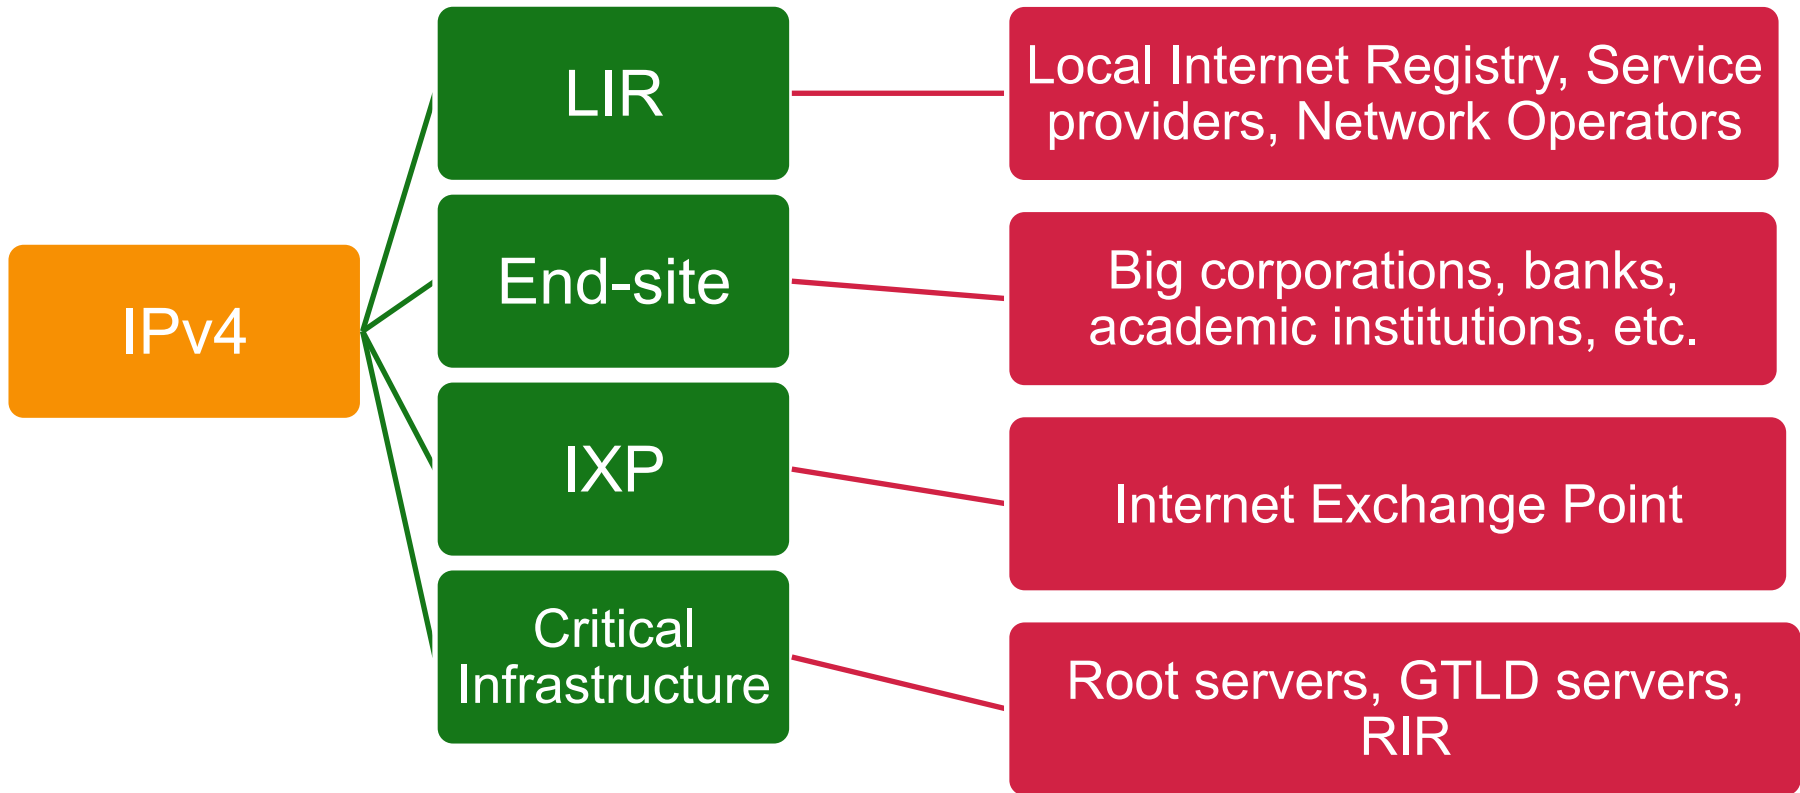

- Decide what kind of number resources you need
  - IPv4, IPv6
- Check your eligibility
  - On the website [www.apnic.net](http://www.apnic.net)
  - Contact the helpdesk [helpdesk@apnic.net](mailto:helpdesk@apnic.net)
- Become familiar with the policies
  - [www.apnic.net/policy](http://www.apnic.net/policy)
- Apply for membership and resources

# How Do I Get Addresses?

# Which group do you belong?

# Initial LIR Delegation Requirements

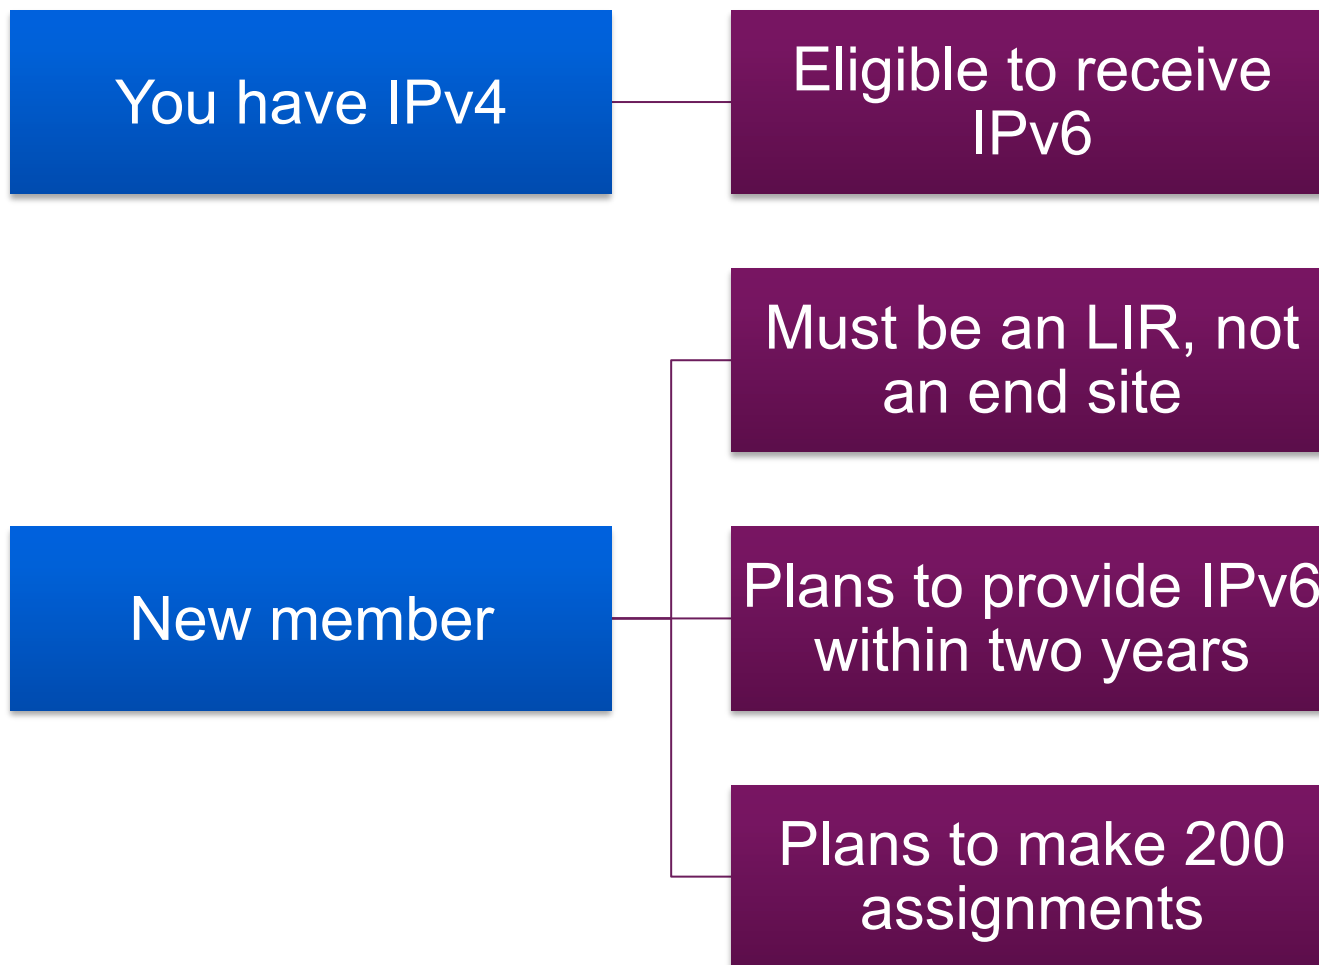

- Have used a /24 ('slash 24') from their upstream provider or can demonstrate an immediate need for a /24
- Have complied with applicable policies in managing all address space previously allocated to it
- Be able to demonstrate a detailed plan to use a /23 within a year

# Criteria for Small Multihoming Delegations

- currently multihomed with provider-based addresses, or
- demonstrates a plan to multihome within one month.
- must demonstrate that they are able to use 25% of the requested addresses immediately and 50% within one year.

More of these at:  
[http://www.apnic.net/services/apply-for-resources/  
check-your-eligibility/check-ipv6](http://www.apnic.net/services/apply-for-resources/check-your-eligibility/check-ipv6)

# IPv6 Eligibility

# How Do I Get Addresses?

- Decide what kind of number resources you need
  - IPv4, IPv6
- Check your eligibility
  - On the website [www.apnic.net](http://www.apnic.net)
  - Contact the helpdesk [helpdesk@apnic.net](mailto:helpdesk@apnic.net)
- **Become familiar with the policies**
  - [www.apnic.net/policy](http://www.apnic.net/policy)
- Apply for membership and resources

# How Do I Get Addresses?

- Decide what kind of number resources you need
  - IPv4, IPv6
- Check your eligibility
  - On the website [www.apnic.net](http://www.apnic.net)
  - Contact the helpdesk [helpdesk@apnic.net](mailto:helpdesk@apnic.net)
- Become familiar with the policies
  - [www.apnic.net/policy](http://www.apnic.net/policy)
- **Apply for membership and resources**

# Initial IP Address Request

- You are required to be an APNIC member in order to initiate your IP Address Request.
- However, you can apply for membership and request for an initial address allocation at the same time.
- <http://www.apnic.net/services/become-a-member>

### Applicant Contact Details

[Restart](#)

**Name: \***

**Position: \***

**Email: \***

**Confirm Email: \***

**I am the Corporate Contact:** [What's this?](#)

Yes  No

**The billing contact is the same as the Corporate Contact:**

Yes  No

Next

# New Member Application Form

- Online payment and automated invoicing
- Applicants can make payment immediately for all requests
- More user friendly, interactive, and informative
- Contacts Management
- Kickstart IPv6 integration
- Essential Whois objects will be created automatically

# Applying for Resources

**MyAPNIC** (IPv6 icon) **APNIC**

Home / Resource management

## Resource management

**Reminder**  
Please register your whois maintainer.

**Useful links**  
Resource management  
Assignment window  
FAQ

**Internet resources**

- View and manage resources

**Whois database updates**

- [Add/Update/Delete Whois objects](#)

**Resource request forms**

- IPv4 addresses
- IPv6 addresses
- AS numbers

**Resource transfer/return**

- Transfer resources into another account
- Receive resources into my account
- Transfer pre-approval
- Return resources to APNIC

**Resources → Resource request forms**

# Evaluation by APNIC

- All address space held should be documented
  - Check other RIR, NIR databases for historical allocations
- ‘No reservations’ policy
  - Reservations may never be claimed
  - Fragments address space
  - Customers may need more or less address space than is actually reserved

# First Allocation

- APNIC IPv4 allocation size per account holder
  - minimum of /24
  - maximum of /22
- Initial IPv6 allocation criteria
  - minimum of /32 IPv6 block
  - larger than /32 may be justified
  - subsequent allocation is based on HD-ratio

# Questions

# Agenda

- Introduction to APNIC
- Policy Development Process
- Internet Registry Policies
- Requesting IP Addresses
- **Whois Database and MyAPNIC**
- Autonomous System Numbers
- Reverse DNS

# Resource Registration

- As part of your membership agreement with APNIC, all Members are required to register their resources in the APNIC database
  - Members must keep records up to date
  - Whenever there is a change in contacts
  - When new resources are received
  - When resources are sub-allocated or assigned

# What is the APNIC Database?

- Public network management database
  - Operated by Internet Registries
- Public data only (For private data, please see “Privacy of customer assignment” module)
  - Tracks network resources
    - IP addresses, ASNs, Reverse Domains, Routing policies
- Records administrative information
  - Contact information (persons/roles)
  - Authorization

# Object Types

## OBJECT

person

role

inetnum

Inet6num

aut-num

domain

route

mntner

mnt-irt

## PURPOSE

contact persons

contact groups/roles

IPv4 addresses

IPv6 addresses

Autonomous System number

reverse domains

prefixes being announced

(maintainer) data protection

Incident Response Team

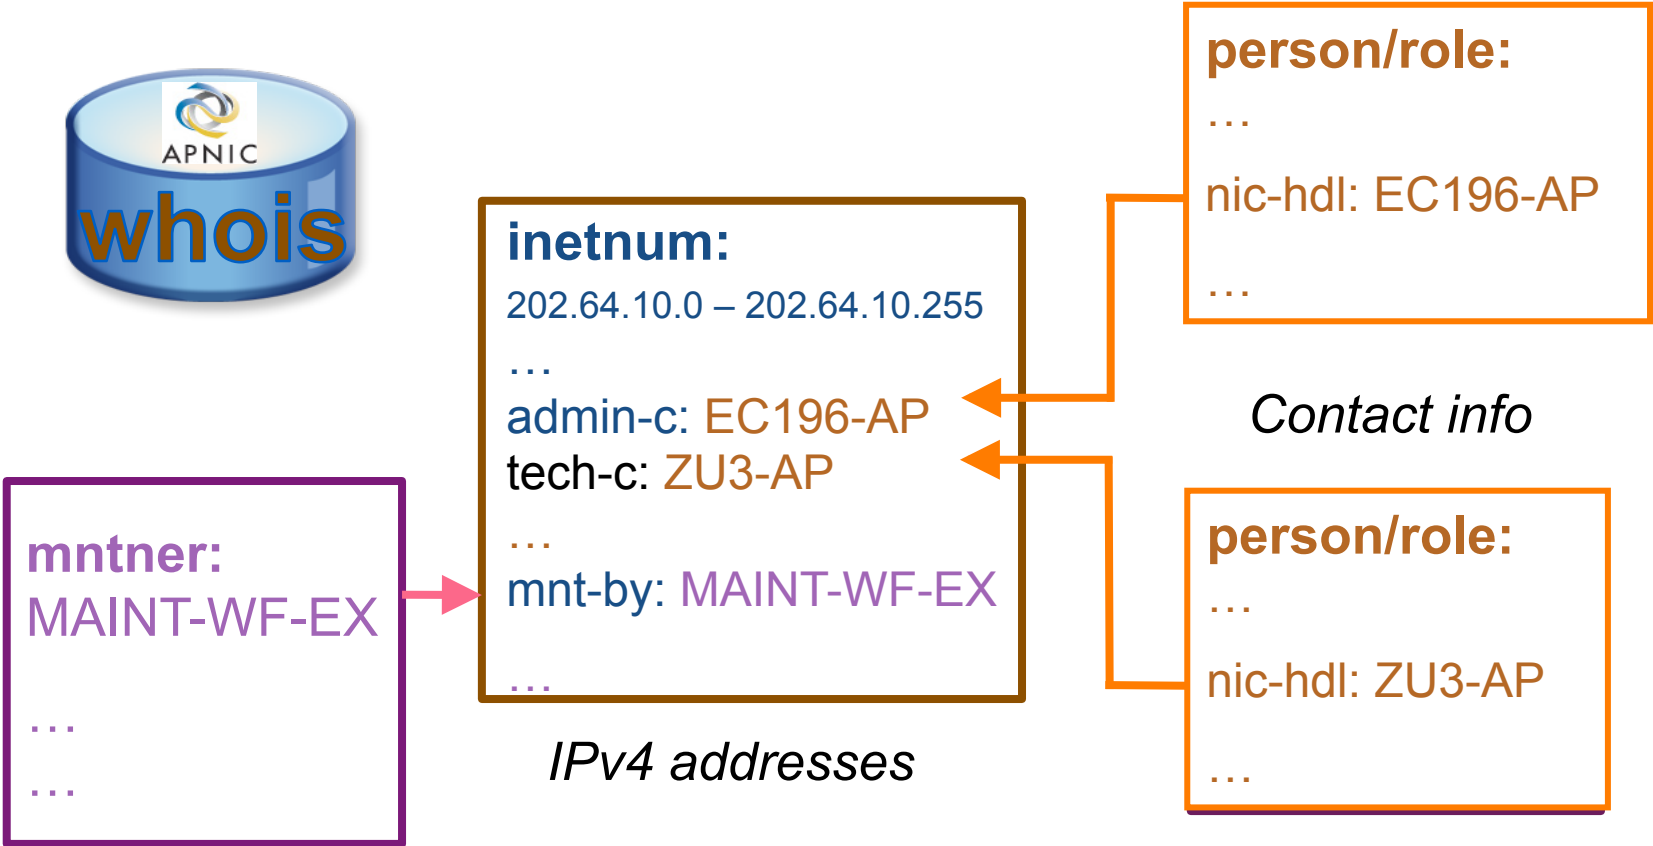

<http://www.apnic.net/db/>

# New Members

- If you are receiving your first allocation or assignment, APNIC will create the following objects for you:
  - Role object
  - Inetnum or inet6num object
  - Maintainer object (to protect your data)
  - Autnum object (if you received an ASN)
- Information is taken from your application for resources and membership

# Inter-Related Objects

\* Please note that the following slides refer back to this one.

# Person Object

- Represents a contact person for an organization
  - Every Member must have at least one contact person registered
  - Large organizations often have several contacts for different purposes
- Is referenced in other objects
- Has a nic-hdl
  - Eg. EC17-AP

# What is a 'nic-hdl'?

- Unique identifier for a person or role
- Represents a person or role object
- Referenced in objects for contact details
  - (inetnum, aut-num, domain...)
  - format: <XXXX-AP>
    - Eg: EC196-AP

```
Person: Eric Chu
address: ExampleNet Service Provider
address: Level 1 33 Park Road Milton
address: Wallis and Futuna Islands
country: WF
phone: +680-368-0844
fax-no: +680-367-1797
e-mail: echu@example.com
nic-hdl: EC196-AP
mnt-by: MAINT-WF-EX
changed: echu@example.com 20020731
source: APNIC
```

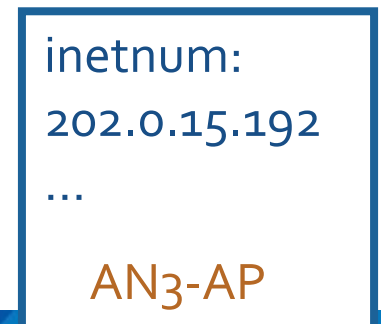

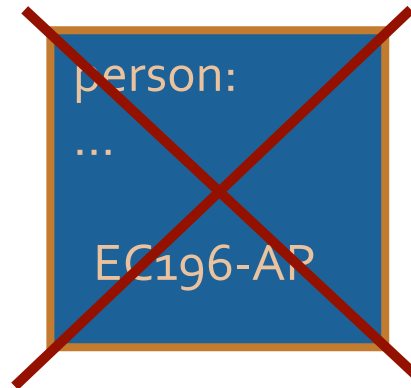

# Role Object

- Represents a group of contact persons for an organization
  - Eases administration
- Also has a nic-hdl
  - Eg. HM20-AP
- used instead of a Person Object as a reference in other objects
  - This means only a single replacement is required instead of many

# Replacing Contacts in the DB - Using Person Objects

*E. Chu is leaving my organization. A. Nagali is replacing him.*

1. Create a Person Object for new contact (**E. Chu**)
2. Find all objects containing old contact (**E. Chu**)
3. Update all objects, replacing old contact (EC196-AP) with new contact (AN3-AP)
4. Delete old contact's (EC196-AP) Person Object

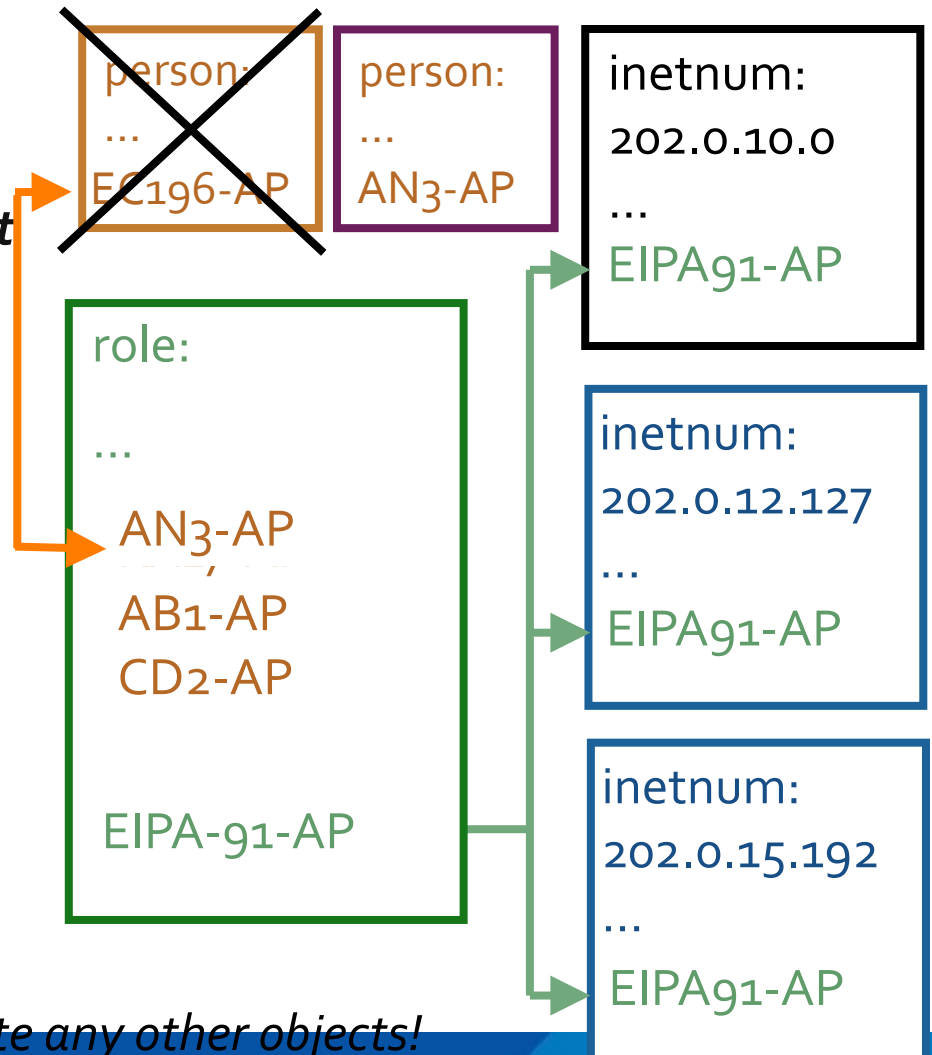

# Replacing Contacts in the DB – Using a Role Object

*E. Chu is leaving my organization.*

*A. Nagali is replacing him.*

*My Role Object contains all contact info, that is referenced in all my objects.*

1. Create a Person Object for new contact (A. Nagali)
2. Replace old contact (EC196-AP) with new contact (AN3-AP) in Role Object
3. Delete old contact's Person Object.

*No need to update any other objects!*

# Inetnum / Inet6num Objects

- Contains IP allocation and assignment information
- APNIC creates an inetnum (or inet6num) object for each allocation or assignment they make to the Member
- All members must create inetnum (or inet6num) objects for each sub-allocation or assignment they make to customers

# APNIC Whois Web Query

▼ Whois search

- > About Whois
- > Using Whois

- ▶ Site Map

## Whois search

Search for

IP address lookups		Miscellaneous queries	
<input type="radio"/> -l	1st level less specific	<input type="button" value="?"/>	<input type="radio"/> -i Inverse attributes <input type="text" value="None"/> <input type="button" value="?"/>
<input type="radio"/> -L	All less specific	<input type="button" value="?"/>	<input type="radio"/> -T Object types <input type="text" value="All"/> as-block as-set aut-num <input type="button" value="?"/>
<input type="radio"/> -m	1st level more specific	<input type="button" value="?"/>	
<input type="radio"/> -M	All more specific	<input type="button" value="?"/>	<b>Query hints</b>
<input type="radio"/> -x	Exact match only	<input type="button" value="?"/>	<ul style="list-style-type: none"><li>• Include "AS" in front of an AS number. Example: AS4808</li></ul>
<input type="checkbox"/> -d	Associated reverse domain	<input type="button" value="?"/>	<ul style="list-style-type: none"><li>• Include "-t" (template only) or "-v" (template and description) in front of an object name to view the template Example: -t inetnum</li></ul>

# What is a Maintainer?

- Protects other objects in the APNIC Whois Database:
- Multiple levels of maintainers exist in a hierarchical manner
- Applied to any object created directly below that maintainer object
- Why do we need Maintainer?
  - to prevent unauthorized persons from changing the details in the Whois DB
  - As parts of a block are sub-allocated or assigned, another layer of maintainers is often created to allow the new users to protect their (sub)set of addresses

# Database Protection

## Maintainer Object

```
mntner:          MAINT-AU-APNICTRAINING

```

# Mnt-by and Mnt-Lower Attributes

- Mnt-by
  - Can be used to protect any object
  - Changes to protected object must satisfy authentication rules of 'mntner' object
- Mnt-lower
  - Also references mnt-by object
  - Hierarchical authorization for inetnum & domain objects
  - The creation of child objects must satisfy this maintainer
  - Protects against unauthorized updates to an allocated range - highly recommended!

# Maintainer Hierarchy Diagram

## Allocated to APNIC:

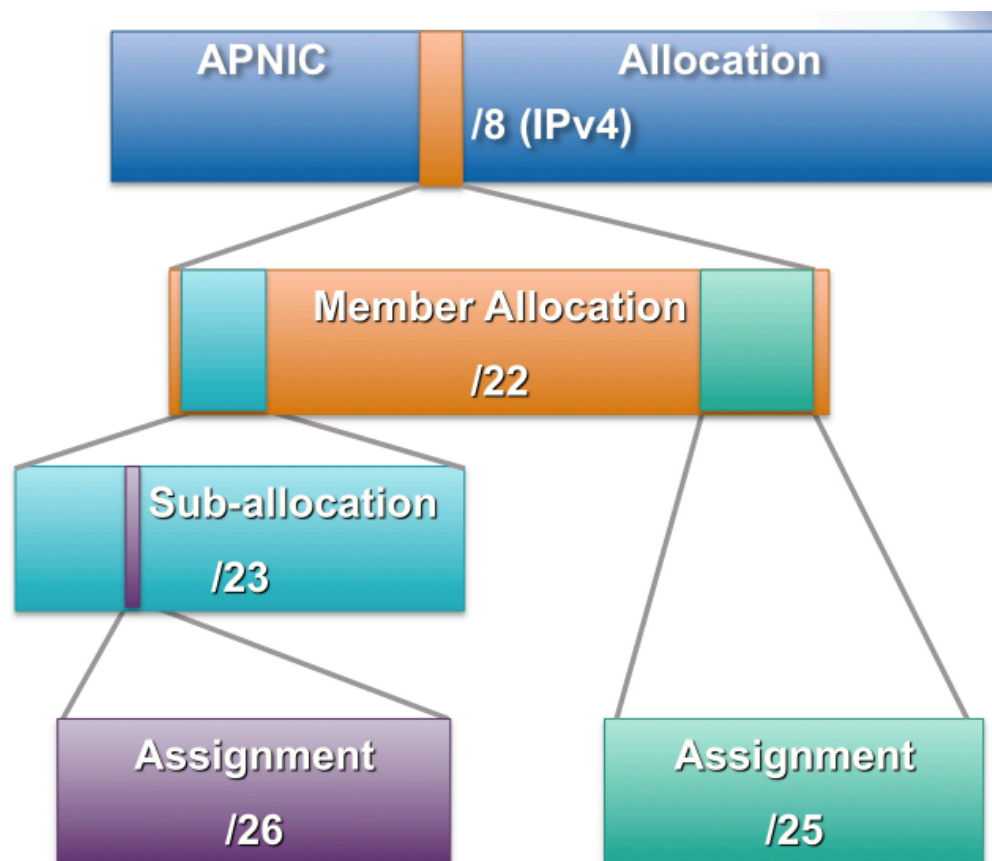

Maint-by can only be changed by IANA

## Allocated to Member:

Maint-by can only be changed by APNIC

## Sub-allocated to Customer

Maint-by can only be changed by Member

# Authentication / Authorization

- APNIC allocation to Member
  - Created and maintained by APNIC

# What is MyAPNIC?

- A secure services website that enables Members to manage Internet resources and account interactions with APNIC online
- Uses 128-bit SSL
- <https://myapnic.net>

# How it Works

# Access to MyAPNIC

- MyAPNIC access is available to all authorized contacts of APNIC accounts by registering your username and password
- Corporate Contacts can register and get instant access  
[www.apnic.net/corporate\\_contacts](http://www.apnic.net/corporate_contacts)
- Other contacts need their registration approved by their Corporate Contact

# Corporate Contact Registration

<https://myapnic.net/register>

# Multiple Account Access

The screenshot displays the MyAPNIC user interface. At the top, the logo "MyAPNIC" is followed by a stylized IPv6 address icon. The user's name "Vivek" and account ID "APNICTRAINING-AU" are shown, along with a "Manage" link. A navigation bar includes "Home", "Resources", "Administration", "Training", and "Tools". The main content area features a "Welcome to MyAPNIC" message and a "What can I do?" section with a list of actions. A sidebar on the left contains a "Hello Vivek!" section with a "My Profile" link highlighted by an orange box, and a "Membership details" section showing account information.

# MyAPNIC Digital Certificate

## Required for:

- Online voting
- Resource certification
- Approve other contacts' certificate request

# Digital Certificate – Corporate Contact

Corporate Contact can download certificate immediately

The screenshot displays the MyAPNIC user interface. At the top, there is a navigation menu with tabs for Home, Resources, Administration, Training, and Tools. Below the menu, the page title is 'Home'. The main content area is divided into several sections:

- Hello Faza!**: A personalized greeting with links for 'My Profile' and 'Manage Contacts'.
- Membership details**: Shows account information: 'Account: MYAPNIC-TEST-AP', 'Expiry: 2020-02-28 Renew', and 'Tier: very small'.
- APNIC Digital Certificate**: A section with the text 'Get your certificate now.' and an icon of a certificate with a key. Below this, a button labeled 'Get a certificate' is highlighted with a red rectangular border.
- What can I do?**: A list of actions users can perform:
  - View and update your resource information for IPv4, IPv6, AS number Resource certification
  - View and update your Member details and Contact details. You may a history
  - Use the Training section to view training and events history
  - Use the APNIC looking glass or generate a prefix report
- News**: A list of recent news items:
  - 02-08-2010 APNIC attends APEC TEL 42
  - 19-07-2010 NRO NC nominations close 26 July
  - 19-07-2010 2009 APNIC Annual Report now available
  - 07-07-2010 APNIC supports SANOG 16
  - 05-07-2010 New APNIC policies now active

# Requesting new Certificate

Home / My Profile / Certificates

## Your Certificates

You have been issued with the following certificate(s):

Serial number	Expiry date
2E9D	2010-02-03 06:27:44

If you require an additional certificate, you are advised to use a backup copy of your current valid certificate.

Please only request an additional certificate when you are not able to recover your backup copy.

An APNIC certificate is required to perform certain operations such as Resource Certification and Online Voting. It is also required for a Corporate Contact to approve certificate requests for other account contacts. A certificate is valid for 12 months from the date of issue.

For more information on APNIC certificates, please see <http://www.apnic.net/services/manage-resources/digital-certificates>.

If you have any other queries, please email [helpdesk@apnic.net](mailto:helpdesk@apnic.net) for assistance.

## RPKI

### Enable Resource Certification

Currently, you have not enabled resource certification for your registry.

- I want to operate in the MyAPNIC RPKI portal.
- I want to host my own certification authority and run an RPKI engine myself.

## Tools

- ›IPv6 Sparse Assignment
- ›IPv6 Subnets
- ›IPv6 Reverse Domains
- ›APNIC Looking Glass
- ›Prefix Report
- ›MD5 Hashing
- ▼Reverse domain verification

The Reverse domain verification tool enables you to check that your zone has been configured correctly, in order to complete your delegation successfully. This includes verification of the required records for DNSSEC implementation.

Reverse domain

DNSSEC verification

# Questions

# Agenda

- Introduction to APNIC
- Policy Development Process
- Internet Registry Policies
- Requesting IP Addresses
- Whois Database and MyAPNIC
- **Autonomous System Numbers**
- Reverse DNS

# What is an Autonomous System Number?

- Autonomous System Numbers (ASNs) are globally unique identifiers for IP networks
- ASNs are allocated to each Autonomous System (AS) for use in BGP routing
- AS numbers are important because the ASN uniquely identifies each network on the Internet

# What Is an Autonomous System?

- Group of Internet Protocol-based networks with the same routing policy
- Usually under single ownership, trust or administrative control
- The AS is used both in the exchange of exterior routing information (between neighboring ASes) and as an identifier of the AS itself

# How Do Autonomous Systems Work?

# Requesting an AS Number

- Eligibility
  - should be multihomed, or will be soon in 1 month.
  - has a single, clearly defined routing policy that is different from the organization's upstream routing policies.
- Request Process: Complete the request form
  - Check with peers if they can handle 4-byte ASN
  - Existing members send the request from MyAPNIC
  - New Members can send AS request along with membership application
- Transfers of ASNs
  - Require legal documentation (mergers etc)

# Requesting an AS Number

- If a member requests an ASN from APNIC for own network infrastructure
  - AS number is “portable”
- If a member requests an ASN from APNIC for its downstream customer network
  - ASN is “non-portable”
  - ASN is returned if the customer changes provider
- Current Distribution
  - Previously 2 byte ASN (16 bits) runs into possibility of exhaustion
  - Currently 4 byte ASN distribution policy 32 bits
  - 2 byte ASN on request with documented justification

# Representation of Routing Policy

- Routing and packet flows

**For AS1 and AS2 networks to communicate**

- AS1 must announce to AS2
- AS2 must accept from AS1
- AS2 must announce to AS1
- AS1 must accept from AS2

# Representation of Routing Policy

## Basic concept

“action pref” - the lower the value,  
the more preferred the route

aut-num: AS1

...

import: from AS2  
action pref=100;  
accept AS2  
export: to AS2 announce AS1

aut-num: AS2

...

import: from AS1  
action pref=100;  
accept AS1  
export: to AS1 announce AS2

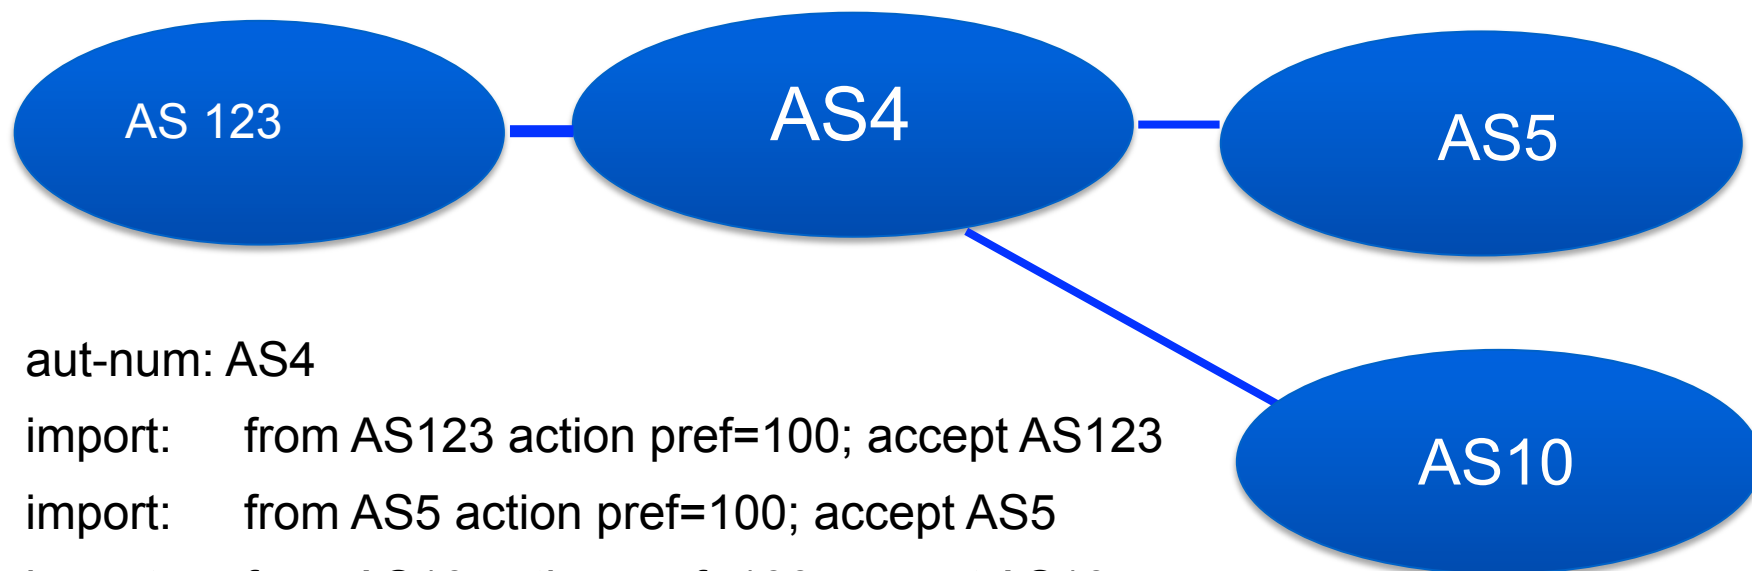

# Representation of Routing Policy

More complex example

- AS4 gives transit to AS5, AS10
- AS4 gives local routes to AS123

# Representation of Routing Policy

aut-num: AS4

import: from AS123 action pref=100; accept AS123

import: from AS5 action pref=100; accept AS5

import: from AS10 action pref=100; accept AS10

export: to AS123 announce AS4

export: to AS5 announce AS4 AS10

export: to AS10 announce AS4 AS5 ← Not a path

# Aut-num Object Example

```
aut-num:      AS4777
as-name:      APNIC-NSPIXP2-AS
Descr:        Asia Pacific Network Information Centre
descr:        AS for NSPIXP2, remote facilities site
import:       from AS2500 action pref=100; accept ANY
import:       from AS2524 action pref=100; accept ANY
import:       from AS2514 action pref=100; accept ANY
export:       to AS2500 announce AS4777
export:       to AS2524 announce AS4777
export:       to AS2514 announce AS4777
default:      to AS2500 action pref=100; networks ANY
admin-c:      PW35-AP
tech-c:       NO4-AP
remarks:      Filtering prefixes longer than /6
mnt-by:       MAINT-APNIC-AP
changed:      paulg@apnic.net 19981028
source:       APNIC
```

**POLICY  
RPSL**

# AS Number Representation

- 2-byte only AS number range : 0 – 65535
- 4-byte only AS number range – represented in two ways
  - AS PLAIN: 65,536 - 4,294,967,295
  - AS DOT: 1.0 - 65535.65535
- Usages
  - 0 and 65535 Reserved
  - 1 to 64495 Public Internet
  - 64496 to 64511 Documentation –RFC5398
  - 64512 to 65534 Private use
  - 23456 represent 32 Bit range in 16 bit world
  - 65536 to 65551 Documentation – RFC 5398
  - 65552 to 4294967295 Public Internet

# AS PLAIN

- IETF preferred standard notation RFC5396
- Continuation on how a 2-Byte AS number has been represented historically
- Notation: The 32 bit binary AS number is translated into a single decimal value
  - Example: AS 65546
- Total AS Plain range:
  - 2 byte: 0 – 65535 (original 16-bit range)
  - 4 byte: 65,536 - 4,294,967,295 (RFC4893)
    - APNIC region uses the AS PLAIN style of numbering

# AS DOT

- Based upon 2-Byte AS representation
  - <Higher2bytes in decimal> . <Lower2bytes in decimal>
    - For example: AS 65546 is represented as 1.10
  - Easy to read, however hard for regular expressions
  - There is a meta character “.” in regular expression
    - For example, a.c matches "abc", etc., but [a.c] matches only "a", "32 bit AS number representation
- Example: AS PLAIN Converted to AS DOT
  - AS PLAIN: 131072 ~ 132095
  - AS DOT: 2.0 ~ 2.1023

# 16 bit and 32 bit ASN - Working Together

- With the introduction of the “new” 32 bit AS Numbers, and the continuation of use of “old” 16 bit AS Numbers, a way had to be found to get them to work together
- The solution is known as AS23456, which allows BGP to either convert or truncate the AS number if it detects an “old” 16 bit number as part of the exchange

# 4-Byte ASN Global Distribution

# Questions

# Agenda

- Introduction to APNIC
- Policy Development Process
- Internet Registry Policies
- Requesting IP Addresses
- Whois Database and MyAPNIC
- Autonomous System Numbers
- **Reverse DNS**

# What is 'Reverse DNS'?

- 'Forward DNS' maps names to numbers
  - svc00.apnic.net → 202.12.28.131
- 'Reverse DNS' maps numbers to names
  - 202.12.28.131 → svc00.apnic.net

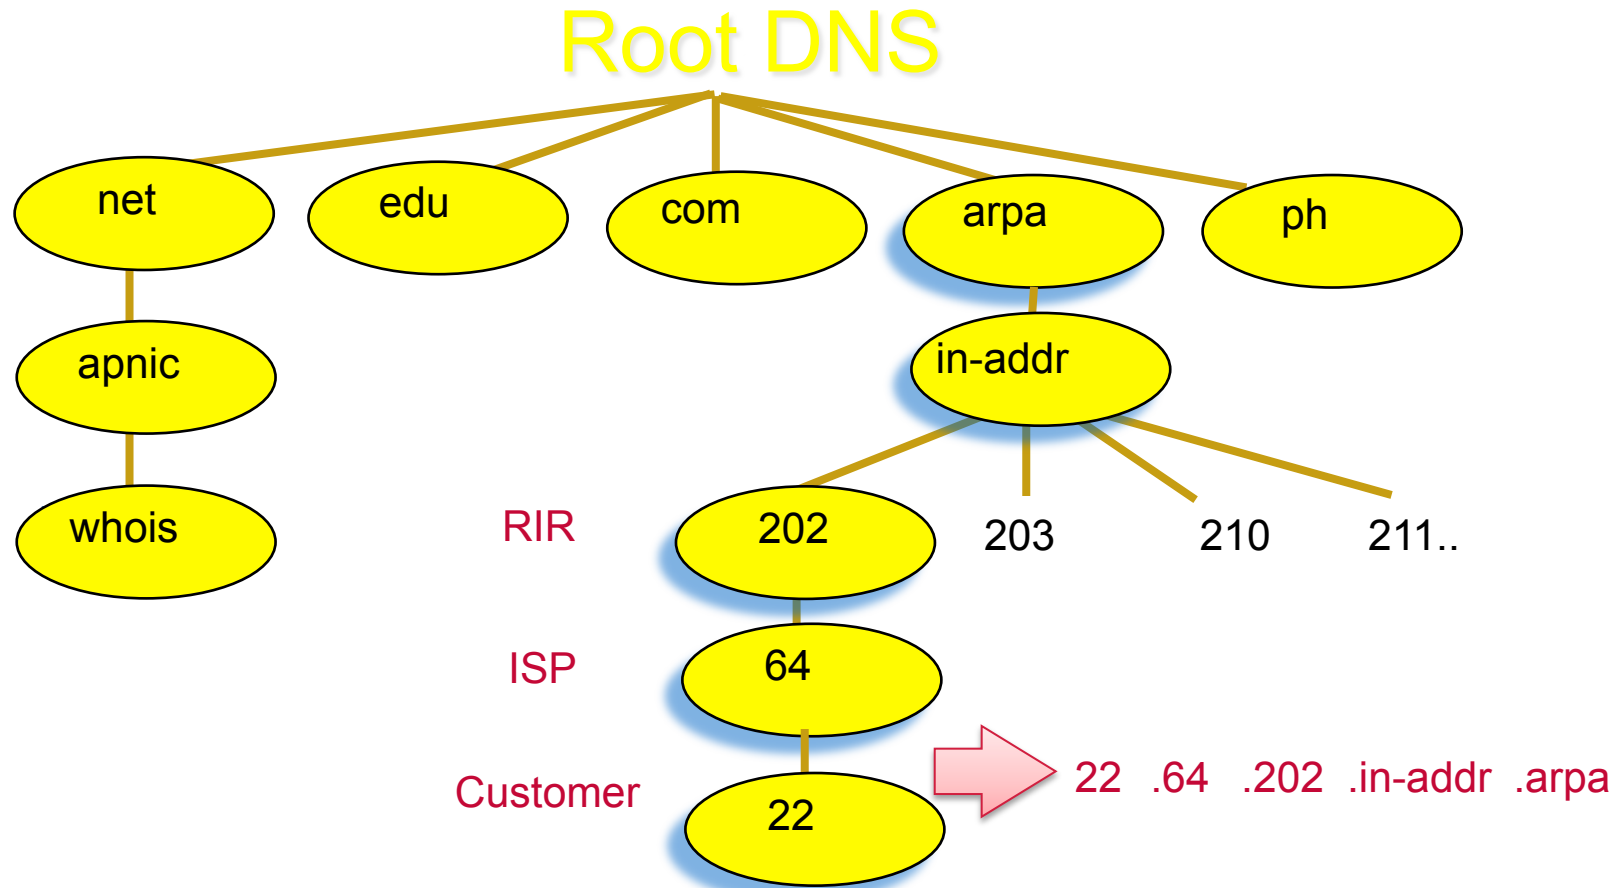

# Reverse DNS - why bother?

- Service denial
  - That only allow access when fully reverse delegated eg. anonymous ftp
- Diagnostics
  - Assisting in network troubleshooting (ex: traceroute)
- Spam identifications
  - Reverse lookup to confirm the source of the email
  - Failed lookup adds to an email's spam score
- Registration responsibilities

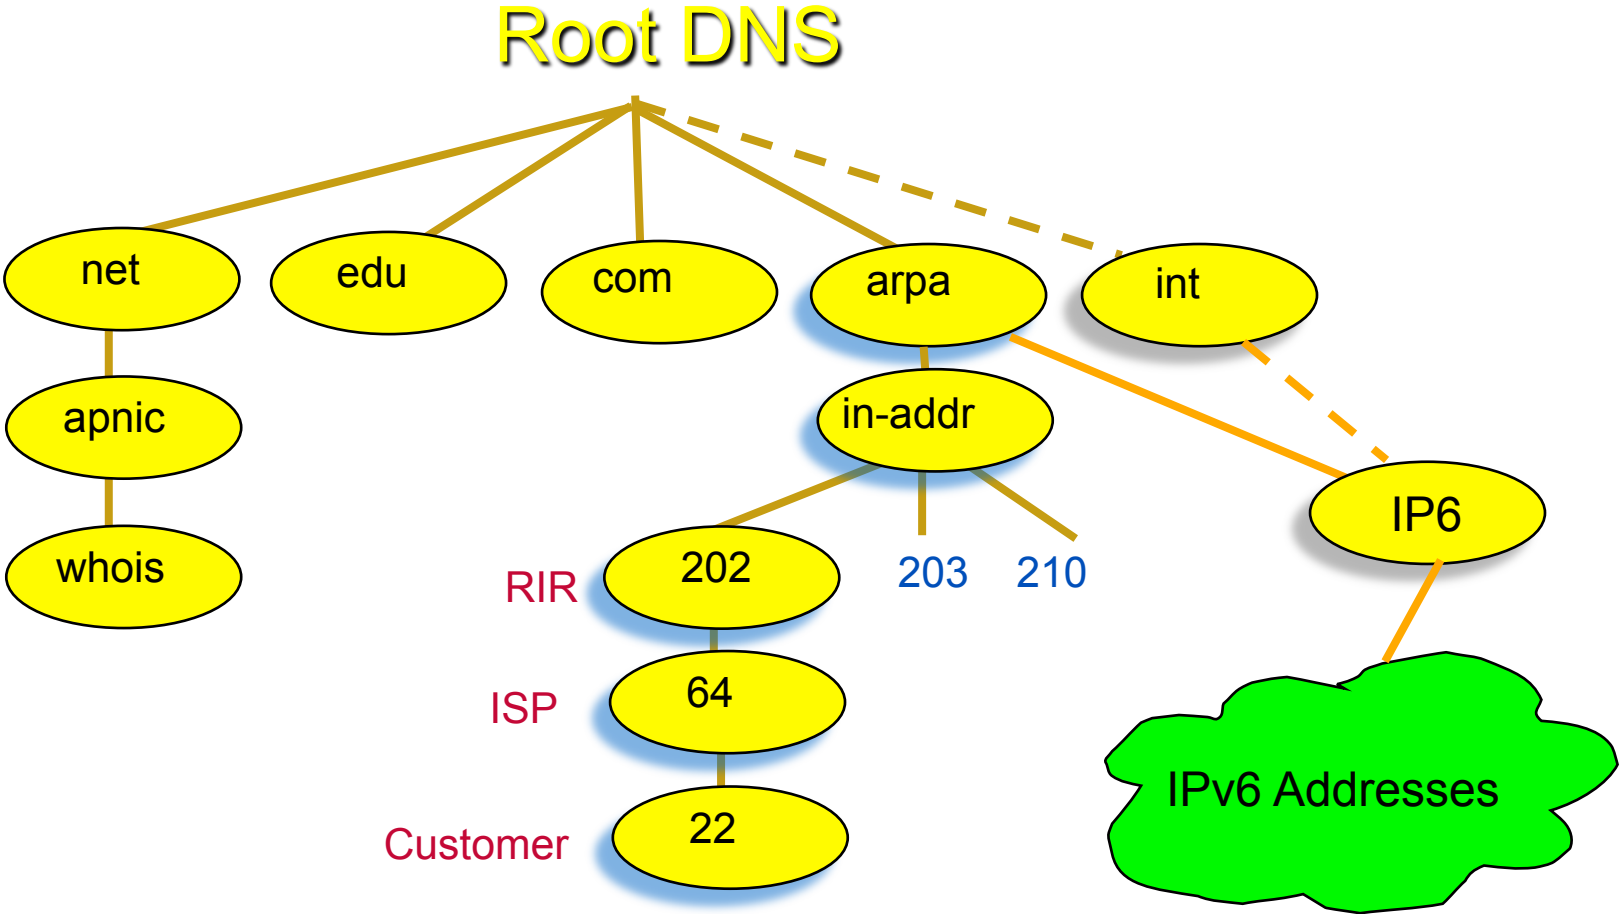

# Principles – DNS tree

- Mapping numbers to names - 'reverse DNS'

# Reverse DNS Tree – with IPv6

# Creating reverse zones

- Same as creating a forward zone file
  - SOA and initial NS records are the same as normal zone
- Main difference
  - need to create additional PTR records
- Can use BIND or other DNS software to create and manage reverse zones
  - Details can be different

# Creating reverse zones (continued)

- Files involved
  - Zone files
    - Forward zone file
    - e.g. db.domain.net
  - Reverse zone file
    - e.g. db.192.168.254
  - Configuration files
    - <named.conf>
  - Other
    - Hints files etc.
    - Root.hints

# Start of Authority (SOA) record

- 

```
<domain.name.>      CLASS   SOA      <hostname.domain.name.>
<mailbox.domain.name> (
                                <serial-number>
                                <refresh>
                                <retry>
                                <expire>
                                <negative-caching> )
```

253.253.192.in-addr.arpa.

# Pointer (PTR) records

- Create pointer (PTR) records for each IP address

- ```
131.28.12.202.in-addr.arpa. IN PTR svc00.apnic.net.
```

or

```
131          IN          PTR          svc00.apnic.net.
```

# IPv6 Reverse Lookups – PTR records

- Similar to the IPv4 reverse record

b.a.9.8.7.6.5.0.4.0.0.0.3.0.0.0.2.0.0.0.1.0.0.0.0.0.0.1.2.3.4.ip6.arpa.

IN PTR test.ip6.example.com.

- Example: reverse name lookup for a host with address 3ffe:  
8050:201:1860:42::1
- \$ORIGIN 0.6.8.1.1.0.2.0.0.5.0.8.e.f.f.3.ip6.arpa.
- 1.0.0.0.0.0.0.0.0.0.0.0.0.2.4.0.0 14400 IN PTR host.example.com.

# A reverse zone example

```
$ORIGIN 1.168.192.in-addr.arpa.  
@      3600  IN SOA test.company.org. (  
        sys\.admin.company.org.  
        2002021301      ; serial  
        1h              ; refresh  
        30M             ; retry  
        1W              ; expiry  
        3600 )          ; neg. answ. ttl  
  
        NS      ns.company.org.  
        NS      ns2.company.org.  
  
1      PTR      gw.company.org.  
        router.company.org.  
  
2      PTR      ns.company.org.  
  
;auto generate: 65 PTR host65.company.org  
$GENERATE 65-127 $ PTR host$.company.org.
```

# Reverse delegation requirements

- /24 Delegations
  - Address blocks should be assigned/allocated
  - At least two name servers
- /16 Delegations
  - Same as /24 delegations
  - APNIC delegates entire zone to member
- < /24 Delegations
  - Read “classless in-addr.arpa delegation”

# APNIC & ISPs Responsibilities

- APNIC
  - Manage reverse delegations of address block distributed by APNIC
  - Process organisations requests for reverse delegations of network allocations
- Organisations
  - Be familiar with APNIC procedures
  - Ensure that addresses are reverse-mapped
  - Maintain nameservers for allocations
  - Minimise pollution of DNS

# Reverse Delegation Procedures

- Standard APNIC database object,
  - can be updated through myAPNIC
- Nameserver/domain set up verified before being submitted to the database.
- Protection by maintainer object
  - (current auths: CRYPT-PW, PGP).
- Any queries
  - Contact [helpdesk@apnic.net](mailto:helpdesk@apnic.net)

# Reverse Delegation Procedures

## Add reverse DNS delegation

**Reminder**  
Please [register](#) your whois maintainer.

Important: The information you provide in the form below will be used to create your domain object in the APNIC Whois Database. Please make sure that your name servers are running and are authoritative for the zone, or your reverse DNS delegation might not function correctly.

**Address range:**  
Use CIDR address prefix notation. Multiple range allowed, one range per line.

  
Example:  
202.12.28.0/22  
202.120.0.0/20

**Name servers:**  
List fully qualified domain name of at least one server.  
Important: Do not list IP addresses or reverse DNS names.

  
Example:  
ns1.example.com  
ns2.example.com

**Maintainer:**

  
Example:  
MAINT-AU-EXAMPLE

[Next](#)

# Whois domain object

```
domain:      28.12.202.in-addr.arpa
